

***Carex canescens* L.**

**White Sedge**

Native

GB & England: Least Concern

VC5 Absent; VC6 Lost

A perennial shortly rhizomatous, loosely tufted sedge of lowland bogs, wet acidic heaths and upland mires. In Somerset, recorded on the peat moors by Sole, in old turf pits about Burtle Moor (Collinson, 1791). There have been no subsequent records for this species which has declined in lowland England.
